Tradelink Functional Specification

Field	Value
Document	Functional Specification Document (FSD), as built
Product	Tradelink, with Tradelink AI
Version	1.1
Date	4 November 2026
Status	Draft for review
Owner	Janya Mali
Related	User Guide, Technical Specification, User stories, Decision records

Contents

17. Known limitations and possible defects
18. Glossary

1. Purpose, audience and scope

Topic	Detail
Purpose	Define what Tradelink does today and the rules behind it. Every statement comes from the code, migrations, tests or an accepted decision record. Planned but unbuilt features are marked **Not built**.
Audience	Product owner, design, QA, business reviewers and interviewers. Engineers should read the Technical Specification.
Scope	The buyer, supplier and admin web app, sign-in and Tradelink AI. The unused Tradelink AI shop foundation at `/r` is covered only in the Technical Specification.
Sources	`app/`, `src/`, 17 applied migrations in `supabase/migrations/`, tests, `USER_STORIES.md`, `adr/`. Where older documents disagree, this document follows the code.
IDs	F-xx feature, FR-xxx requirement, BR-xx business rule, NFR-xx non-functional requirement, SCR-xx screen, J-xx journey, DEC-xx decision. Story IDs (SH, AUTH, BUY, SUP, ADM, AI, OPS) come from `USER_STORIES.md`.

2. Product overview

Problem. Small food businesses in Singapore order stock over WhatsApp and phone calls. Orders get lost in chat, nobody knows what stock is really available, short or damaged deliveries are hard to follow up, and spending is hard to track. Suppliers re-type orders and find stock problems late.

Goals	Non-goals
One place to order from every supplier and manage those orders	Moving money: no payments, invoices or Stripe
Stock checked and reserved when an order is placed	Accounting, tax or delivery routing
A clear record of every delivery, problem and credit	A public marketplace
An assistant that acts only after the person confirms	AI that changes data on its own
An operations team that sees what needs attention and settles disputes	

Role	Value today
Buyer	Order by typing to Tradelink AI or from usual items; one review step with stock, minimums, cut-offs and budget; delivery checks, problems and credits; weekly insights
Supplier	Orders arrive with stock reserved; accept, part accept (now or as a second delivery) or reject; inventory with full history; problems in one list
Admin	A work queue with assignment, dispute resolution, supplier suspension and an append-only audit log

3. Scope

Area	Built	Not built	Reason
Accounts	Sign-in, sign-out, password reset, self sign-up	Two-factor sign-in, invitation onboarding, team members	Easy to try (ADR 0024)

Area	Built	Not built	Reason
Ordering	Tradelink AI, usual items, products, cart review, one order per supplier, stock reservation	Minimum-order negotiation and fees	Designed in ADR 0020, not built
Fulfilment	Accept, part accept, reject, deliver, second delivery, date changes, messages	Routing	Outside the brief
After delivery	All here, Not here yet, problems, answers, credits, disputes	Invoices of any kind	Not built; an `invoice` problem type exists but cannot be created
Payments	None	Payments, subscriptions, Stripe	Owner decision, 4 November 2026
New suppliers	A buyer adds an *invited* supplier record; admins see a follow-up after 24 hours	Invitation email, accept page, claiming the record	Replaced by self sign-up (ADR 0024)
Notifications	In-app bell panel and Alerts page	Email, SMS, push	No provider; push code is not switched on
Admin	Attention queue (lead and operators), disputes, suspend and reactivate, read-only lists, audit log	Approving, inviting or editing people; system status	Not built
Devices	Responsive web app, manifest, offline page	Native apps, install prompt, offline ordering	See DEC-01

4. Users and permissions

Role	Description	Main goals
Buyer	Member of a buyer business; one person, one business	Stay stocked, order fast, check deliveries, get credits, keep to budget
Supplier	Member of a supplier business	Turn orders into deliveries, keep stock and prices right, answer problems
Admin lead	Operator with `admin_profiles.is_lead` (Hannah in the demo)	See and assign the whole queue, settle disputes, oversee suppliers
Admin operator	Any other operator	Work the items assigned to them

Y = allowed, Own = own records, Conn = businesses they trade with, N = refused. Database functions and Row Level Security enforce this; opening another role's pages is refused and logged.

Action	Buyer	Supplier	Lead	Operator
Create an account by sign-up	Y	Y	N	N
See products and prices	Conn	Own	Y	Y
Use Tradelink AI	Y	Y	N	N
Save a cart, place orders	Y (Conn)	N	N	N

Action	Buyer	Supplier	Lead	Operator
Cancel an order	Own, while pending	N	N	N
Accept, part accept, reject, deliver, deliver the rest	N	Own (deliver also while suspended)	N	N
Cancel the rest, ask to move a date, send a message	Own	Own	N	N
All here, Not here yet, report a problem, confirm a credit	Own	N	N	N
Answer a problem	N	Own	N	N
Add a product for a supplier, add a supplier not on Tradelink	Y (Conn)	N	N	N
Add products, receive stock, change prices, adjust stock, edit terms	N	Own	N	N
Edit budget, alerts and usual items	Own	N	N	N
See the attention queue	N	N	All	Assigned only
Assign an attention item	N	N	Y	N
Mark an attention item handled	N	N	Y	Assigned only
Resolve disputes, suspend suppliers, see all orders and accounts	N	N	Y	Y
Read the audit log	Rows about own business (database only)	Activity page	Y	Y

5. Feature catalogue

ID	Feature	Role	Status	Stories
F-01	Sign in, sign out, reset password	All	Built	AUTH-01 to AUTH-03
F-02	Self sign-up	Buyer, supplier	Built	AUTH-10
F-03	Role routing and access	All	Built	AUTH-06, AUTH-09
F-04	App shell, Home with Next up, theme, empty and error states	All	Built (theme per browser)	SH-01 to SH-06, SH-12; BUY-01 to 04, 07 to 09; SUP-01, 02; ADM-01
F-05	In-app notifications	All	Built	SH-09, ADM-08
F-06	Tradelink AI assistant with confirm cards	Buyer, supplier	Built	BUY-45, 47 to 50; AI-04, AI-05
F-07	Order from typed text	Buyer	Partial (no rule-based fallback in the live app)	BUY-10, BUY-11, AI-01 to AI-03
F-08	Usual items and tomorrow's order	Buyer	Built	BUY-08, BUY-12, BUY-46

ID	Feature	Role	Status	Stories
F-09	Products, cart review, place orders, stock reservation	Buyer	Built	BUY-13 to 17, 20, 22, 23, 42
F-10	Below-minimum warning	Buyer, supplier	Built (no negotiation)	BUY-24
F-11	Add a missing product	Buyer	Built	BUY-18
F-12	Add a supplier not on Tradelink	Buyer	Partial (no invitation sent)	BUY-19, ADM-06
F-13	Orders, delivery checks, problems, credits	Buyer	Built	BUY-27 to 31, BUY-37
F-14	Insights and budget	Buyer	Built	BUY-38 to 41, 43, 44
F-15	Accept, part accept, reject, deliver, second delivery	Supplier	Built	SUP-03 to SUP-07, BUY-21
F-16	Date changes and order messages	Both	Built	BUY-21
F-17	Answer problems	Supplier	Built	SUP-09
F-18	Inventory, stock history, activity, profile	Supplier	Built	SUP-10 to SUP-18, OPS-01
F-19	Attention queue with lead and operators, disputes	Admin	Built	ADM-02 to ADM-07
F-20	Orders, suppliers, users, operators, audit log, suspension	Admin	Built (view only except suspension)	ADM-09 to 14, 16, 18, 19; SUP-22
F-21	No overselling, idempotency, state machines, rate limits	System	Built (rate limits partial)	OPS-02 to OPS-04, OPS-07

Not built, with their stories in section 16: two-factor sign-in and invitations, push and live updates, invoices, negotiation, system status and admin connections.

6. Functional requirements

Test references are real files; "No automated test" means the behaviour was checked by hand or in code review.

ID	Requirement: acceptance criteria	Role	Test reference
FR-001	**Sign in with email and password.** Lands on the role home or a safe `next` path; wrong details show "Check your email and password.".	All	`src/features/auth/routing.test.ts`, `e2e/smoke.spec.ts`
FR-005	**Create a buyer or supplier account.** Active business created and connected to every active business of the other kind; duplicate names refused.	Public	`src/features/auth/signUp.test.ts`

ID	Requirement: acceptance criteria	Role	Test reference
FR-006	**Keep each person in their own area.** A buyer opening `/admin` lands on `/buyer`; the attempt is logged as denied.	All	`src/features/auth/routing.test.ts`
FR-010	**Role navigation and counts.** Top bar on laptop, bottom tabs on phone; counts match their lists.	All	`src/features/shell/nav.test.ts`
FR-013	**In-app notifications with one action each.** The action opens the right order section.	All	`src/features/notifications/routes.test.ts`
FR-020	**Home shows what needs the buyer.** Next up steps from the data; a clear message when nothing is due.	Buyer	`src/domain/todos.test.ts`, `src/domain/home.test.ts`
FR-021	**Suggest tomorrow's order.** Items under 3 days left topped up to 7 days, within stock; Not today hides it.	Buyer	`src/domain/reorder.test.ts`
FR-022	**Order through Tradelink AI.** Nothing changes until the buyer taps a confirm card; no invented products.	Buyer	`src/features/ai/tools.test.ts`
FR-025	**Review the cart.** Lines by supplier, Checked line, cut-offs, budget; Place disabled while a line needs fixing.	Buyer	`src/features/ordering/line-view.test.ts`, `src/features/ordering/cart-groups.test.ts`
FR-028	**Warn below a supplier's minimum.** Warning with the gap; placing still allowed; order flagged for both sides.	Buyer	`src/domain/minimum.test.ts`
FR-030	**Place orders and reserve stock.** One order per supplier; a shortfall places nothing and highlights the lines.	Buyer	`tests/concurrency/reservations.test.ts`, `e2e/order-flow.spec.ts`
FR-032	**Add a missing product.** Unconfirmed product with stock 0; supplier told; duplicates refused.	Buyer	No automated test
FR-033	**Add a supplier not on Tradelink.** Invited record created; nothing is sent to the supplier.	Buyer	`src/features/ai/tools.test.ts`
FR-042	**Cancel a pending order.** Stock released, supplier told; not possible once accepted.	Buyer	No automated test
FR-045	**Report a problem on a delivered line.** Amount = quantity × unit price; note at most 500 characters.	Buyer	`e2e/order-flow.spec.ts`
FR-046	**Confirm a credit arrived.** Credit stays open until confirmed; supplier told.	Buyer	`e2e/order-flow.spec.ts`, `src/features/buyer/orders/summary.test.ts`

ID	Requirement: acceptance criteria	Role	Test reference
FR-048	**Ask to move a delivery date.** Only the other side can answer; accepting moves the date.	Both	`src/features/ai/tools.test.ts`
FR-050	**Insights.** Rejected and cancelled orders never count as spend.	Buyer	`src/domain/insights.test.ts`, `src/features/insights/summary.test.ts`
FR-062	**Accept an order.** Date today or later; buyer-added products confirmed first; shortfall refused.	Supplier	`src/features/supplier/dates.test.ts`, `e2e/order-flow.spec.ts`
FR-063	**Part accept an order.** Unsent stock released; the rest dropped or kept for a later date (not reserved).	Supplier	No automated test
FR-065	**Deliver an order and the rest.** Stock leaves on hand and reserved; the rest needs free stock.	Supplier	`e2e/order-flow.spec.ts`
FR-067	**Answer a problem.** Credit needs an amount above 0; Replace not offered for late problems; dispute alerts admins.	Supplier	`src/features/supplier/issues.test.ts`
FR-080	**Attention queue.** High first, then oldest; the lead sees all, operators only their own.	Admin	`src/features/admin/attention.test.ts`
FR-082	**Assign an item.** Saved choice stays shown; operators see "Assigned to you" and cannot assign.	Lead	`src/features/admin/attention.test.ts`
FR-084	**Resolve a dispute.** Credit buyer or Close, no credit; both sides told.	Admin	No automated test
FR-085	**Suspend or reactivate a supplier.** Pending orders cancelled and stock released; accepted orders can still be delivered.	Admin	No automated test
FR-091	**AI changes data only after a tap.** The change is checked again on the server and runs as the person.	Both	`src/features/ai/tools.test.ts`
FR-093	**AI fails safely.** "Tradelink AI is not set up yet." or "...not available right now"; the rest of the app works.	Both	No automated test

7. User journeys

J-01 Ordering

Step	Actor	Action	System response	Exception
1	Buyer	Opens Home	"Place tomorrow's order" when usual items run low	No usual items: use Tradelink AI or Products
2	Buyer	Adds lines (plan, Tradelink AI, Products)	Lines go to the cart; AI asks first	AI unavailable: use Products
3	Buyer	Reviews the cart	Checked line, cut-offs, minimum warnings, budget	Over-stock lines block placing
4	Buyer	Places N orders	One order per supplier, stock reserved, suppliers told	Stock taken meanwhile: nothing placed, lines highlighted

J-02 Supplier fulfilment

Step	Actor	Action	System response	Exception
1	Supplier	Accepts with a date	Lines reserved and repriced; buyer told	Past date, unconfirmed product or short stock refused
1b	Supplier	Part accepts	Unsent stock released; rest dropped or kept for a later date	Sending nothing is a rejection
1c	Supplier	Rejects	Stock released; buyer told	Only while pending
2	Supplier	Out for delivery, then delivered	Buyer told each time; stock leaves	—
3	Supplier	Delivers the rest	Taken from free stock; buyer checks again	Short free stock refused; see BUG-01

J-03 Problems and credits

Step	Actor	Action	System response	Exception
1	Buyer	All here, Not here yet, or Report a problem	Order checked, or a problem opened and the supplier told	Late already reported: refused
2	Supplier	Credit, Replace, On the way, or Dispute	Buyer told; a dispute alerts admins	Credit needs an amount above 0
3	Buyer	Marks the credit received	Problem closes as credit received; supplier told	Until then it shows "Confirm credit"

J-06 Disputes

Step	Actor	Action	System response	Exception
1	Supplier	Disputes a problem	Buyer sees "Under review"; high-priority attention item	—
2	Lead	Assigns it	The operator sees it	—
3	Admin	Credit buyer, or Close, no credit	Credit promised, or Closed; both sides told	Only for disputed problems

J-04 Invoice checks: Not built. There is no invoice upload, reading or check, and the `invoice` problem type cannot be created.

J-05 Adding a supplier not on Tradelink. The buyer adds the supplier through a Tradelink AI form card, which creates an invited record that orders can name. After 24 hours admins see "has not joined". No message is sent, and if the supplier signs up under the same name it is refused (BUG-02).

8. Business rules

ID	Rule	Reason
BR-01	Money is integer cents in the app and `numeric(12,2)` in the database; times use Singapore time; weeks run Monday to Sunday	Accuracy (ADR 0019)
BR-02	One person belongs to one business; the business kind is the role	Simple tenancy (ADR 0005)
BR-03	Placing creates one order per supplier; a cart holds at most 60 lines	Each supplier handles its own order
BR-04	Available = on hand − reserved; no order may take more	No overselling (ADR 0006)
BR-05	Stock is reserved at placing; buyer-added products are reserved when the supplier accepts	Unconfirmed stock is unknown
BR-06	Below a supplier's minimum the order is warned and flagged, never blocked	Decision D5 (ADR 0020)
BR-07	Accepting reprices lines that were not held at the current price	Buyer-added products had no agreed price
BR-08	The rest of a part-accepted order is not reserved; it is taken from free stock on delivery	Stock may arrive later
BR-09	Problems are reported on delivered lines; amount = quantity × unit price; one open late problem per order	Clear, fair claims
BR-10	A promised credit stays open until the buyer confirms it arrived	Owner request, 4 November 2026
BR-11	Suspending a supplier cancels its pending orders and releases their stock; accepted orders can still be delivered	Buyers are not left waiting
BR-12	The lead sees and assigns every attention item; operators see only their own	Owner request, 4 November 2026
BR-13	Tradelink AI changes data only after the person taps, and runs as that person	ADR 0008, ADR 0010
BR-14	Rate limits: 60 AI messages and 30 order messages per person per hour	Cost and abuse control (ADR 0014)
BR-15	The audit log, stock history, price changes and order events cannot be changed or deleted; critical actions carry an idempotency key	Trustworthy history (ADR 0004)

9. State models

Entity	From	Event	To	By	Side effects
Order	—	Place	Pending	Buyer	Stock reserved; supplier told
Order	Pending	Accept or part accept	Accepted	Supplier	Lines reserved and repriced; buyer told
Order	Pending	Reject	Rejected	Supplier	Stock released
Order	Pending	Cancel, or supplier suspended	Cancelled	Buyer, admin	Stock released
Order	Accepted	Out for delivery	Out for delivery	Supplier	Buyer told
Order	Out for delivery	Delivered, All here or a problem	Delivered	Supplier, buyer	Stock leaves on hand and reserved
The rest	—	Part accept with a later date	Waiting	Supplier	Not reserved
The rest	Waiting	Send, then deliver	Out for delivery, Delivered	Supplier	Free stock used; delivery check reset
The rest	Waiting	Cancel the rest	Cancelled	Either side	Other side told
Problem	—	Report or Not here yet	Open	Buyer	Supplier told
Problem	Open	Credit / Replace / On the way / Dispute	Credit promised / Replacement promised / Supplier replied / Disputed	Supplier	Buyer told; dispute alerts admins
Problem	Disputed	Credit buyer / Close	Credit promised / Closed	Admin	Both sides told
Problem	Credit promised	Mark credit received	Credit received	Buyer	Supplier told
Supplier	—	Sign-up	Active	Supplier	Connected to every active buyer
Supplier	Active ↔ Suspended	Suspend / Reactivate	Suspended / Active	Admin	Pending orders cancelled on suspend; buyers told
Invited business	—	Buyer adds supplier	Invited	Buyer	Admin follow-up after 24 hours; no exit is built

Delivered, rejected and cancelled orders, and closed or credited problems, are end states. Invoices have no state model: **Not built**.

10. Screens

ID	Role	Screens
SCR-01	Public	Sign in, Create an account, Forgot password, Reset password, Offline
SCR-10	Buyer	Home, Tradelink AI, Cart, Products, Orders and order page, Insights, Alerts, Settings
SCR-20	Supplier	Home, Tradelink AI, Orders and order page, Inventory, Stock history, Activity, Alerts, Settings
SCR-30	Admin	Home, Needs attention, Orders, Suppliers and supplier page, Low stock, Users and buyer page, Operators, Audit log, Alerts, Settings

Every list has a plain empty message. Failures show "This page did not load" with Try again. The User Guide shows each screen.

11. Notifications

All notifications are in-app (bell panel and Alerts page). There is no email, SMS or push.

Event	Recipient	Action
Order placed	Supplier	Review order
Accepted, part accepted, rejected, out for delivery, delivered	Buyer	Open, See changes, Check delivery
Order cancelled (buyer or suspension)	Supplier, buyers	Open
The rest cancelled, date change, message	The other side	Answer, Reply, View order
Problem reported, delivery late	Supplier	Answer
Problem answered	Buyer	Confirm credit, or View order
Credit received, product added	Supplier	View order, Inventory
Dispute opened, new account	Admins	Open
Dispute resolved	Buyer and supplier	Open
Supplier suspended or reactivated	Supplier and its buyers	Open

12. AI behaviour

Tradelink AI runs on the server as the signed-in person, using Claude (`claude-sonnet-5-5` by default).

Capability	User control	Failure handling	Limits
Answer questions from the person's own data	Read only	"Not available right now"	60 messages per hour; 6 tool rounds; 2,000 characters per message
Buyer actions: cart, order now, place, cancel, check, report, credits, budget, usual items	Confirm card; checked again on the server	Plain error, no partial change	11 read, 17 confirm, 2 card-only tools

Capability	User control	Failure handling	Limits
Supplier actions: accept, part accept, reject, deliver, answer, stock, prices, terms	Confirm card	As above	7 read, 17 confirm, 1 card-only
Add a product or a supplier	Pre-filled form card the person submits	Duplicates refused	The model cannot call these itself
Message, move a date, answer a date request	Confirm card; no added details	—	30 order messages per hour
Explain an order on its page	Read only	—	—

Text from the database is treated as data, never as instructions. Usage is recorded in `ai_usage`. **Not built:** invoice reading, negotiation drafts, an evaluation set, and a rule-based fallback reader in the live assistant.

13. Reports and insights

Metric	Definition	Shown to
Spend, budget and pace	Orders placed since Monday (Singapore time), excluding rejected and cancelled; budget default S$900, warning from 75%	Buyer
Supplier share, on-time record, price changes, overcharges caught	Over the last 5 weeks; on time = on or before the confirmed date	Buyer
Days left	(in shop + on order) ÷ use per day	Buyer
Today against a usual day, pick list, quiet customers	Same weekday over 4 weeks; quantities to pack across orders	Supplier
Open orders and value, operators online	Pending to out for delivery; seen within 5 minutes	Admin

14. Non-functional requirements

ID	Category	Requirement	Verification
NFR-01	Security	Row Level Security on every table; no write policies; writes only through checked functions	Migration review
NFR-02	Security	AI and secret keys are used only on the server; secrets never in the repository	Code review; repository scan, 4 November 2026
NFR-03	Security	Refused actions are logged as denied; security headers set (no Content Security Policy yet)	`next.config.ts`; code review
NFR-04	Integrity	Stock is never oversold under parallel orders	`tests/concurrency/reservations.test.ts` (opt-in, not run for this document)

ID	Category	Requirement	Verification
NFR-05	Integrity	Status changes follow section 9; history is append-only; critical actions are idempotent	Database triggers; `e2e/order-flow.spec.ts`
NFR-06	Usability	Sentence case, no exclamation marks or emoji; status shown by word as well as colour	Design rules; code review
NFR-07	Responsiveness	Every buyer and supplier page fits a phone	`e2e/pages.spec.ts`
NFR-08	Performance and availability	No response-time, load or uptime targets measured; liveness check only (`/api/health`)	Not verified

15. Key product decisions

ID	Decision	Choice	Why	Trade-off
DEC-01	Responsive PWA, not native apps	One web app with manifest and offline page (ADR 0016)	One codebase, no app store, works from a link	No install prompt or push yet
DEC-02	Next.js and Supabase	Next.js on Vercel; Supabase Postgres, Auth and RLS (ADR 0002, ADR 0003)	Server rendering keeps keys on the server; RLS needs `auth.uid()`	Tied to two platforms
DEC-03	Permissions in server checks and RLS	Reads through RLS; writes only through checked functions (ADR 0004)	Holds even if the screens are bypassed	Rules live in SQL
DEC-04	Buyers review AI output before sending	AI drafts; a person taps to confirm	AI can misread; orders commit money	An extra tap; "Order now" uses one confirm tap (Inferred rationale)
DEC-05	Stock reserved in database transactions	Row locks in product order inside one transaction (ADR 0006)	No overselling, consistent history	Contention under heavy load (not measured)
DEC-06	How suppliers join	Self sign-up now; secure invitations planned (ADR 0024)	Easy to try	Anyone can join; invited records cannot be claimed
DEC-07	Invoices checked but never paid	Check-only was decided; nothing built; no payments	Never move money	No invoice protection yet
DEC-08	Light and dark mode from the design system	Tokens generated from `design-handoff` (ADR 0015)	One source for both themes	Theme remembered per browser
DEC-09	One order per supplier	Placed together from one cart	Each supplier owns its delivery and problems	One cart can create several orders
DEC-10	Below-minimum allowed	Warn and flag (ADR 0020)	Buyers sometimes need a small order	Negotiation not built

ID	Decision	Choice	Why	Trade-off
DEC-11	Lead and operators	Lead sees and assigns all; operators their own	Owner request; Inferred rationale: clear ownership	No ADR
DEC-12	No payments or Stripe	None	Owner decision, 4 November 2026	No revenue features
DEC-13	Two deliveries for a part accept	Supplier drops the rest or sends it later	Owner request	The rest is not reserved
DEC-14	Notifications in-app only	In-app for now	Inferred rationale: no email provider; push not on	Updates seen only in the app

16. Requirements traceability

Area	Built	Partial	Not built
Shared (SH)	SH-01 to 06, 11, 12	SH-07, 08, 09 (in-app only), 13	SH-10, 14
Access (AUTH)	AUTH-01 to 03, 06, 09, 10	—	AUTH-04, 05, 07, 08
Buyer (BUY)	BUY-01 to 04, 07 to 09, 12 to 18, 20 to 24, 28 to 31, 37 to 50	BUY-10, 11, 19, 26, 27	BUY-05, 06, 25, 32 to 36
Supplier (SUP)	SUP-01 to 07, 09 to 18, 22	—	SUP-08, 19, 20, 21
Admin (ADM)	ADM-01 to 05, 07 to 14, 16, 18	ADM-06, 19	ADM-15, 17, 20
AI	AI-05	AI-01 to 04	AI-06, 07, 08
Operations (OPS)	OPS-01 to 04, 08	OPS-05, 06, 07	OPS-09 to 12

Each built story maps to the requirements in section 6 and the tests named there.

17. Known limitations and possible defects

Not built: invoices; invitations and claiming an invited supplier; two-factor sign-in; email and push; negotiation; admin approval and editing; system status; live updates; changing a password in Settings; an install prompt; CI, retention jobs, an AI evaluation set and a job schedule.

Partial: no rule-based fallback when Claude is down; theme per browser; rate limits only on AI and messages; only admin saves recover from a page left open across a deploy; the audit Organisation filter shows changes made *by* that business.

ID	Possible defect (recorded, not fixed)	Effect
BUG-01	`deliver_rest` is allowed before the first delivery	Stock counted twice
BUG-02	Sign-up treats an invited business name as taken	Invited supplier cannot join
BUG-03	Supplier answers exist for invoice problems that cannot be created	Dead path

ID	Possible defect (recorded, not fixed)	Effect
SEC-01	Later helper functions keep the default execute grant	Low risk; RLS still blocks writes
SEC-02	Any signed-in user can call `hit_rate_limit` with any action	Rows can grow without limit
SEC-03	No Content Security Policy header	Weaker script-injection protection
OPS-01	The job endpoint is public and nothing schedules it	Jobs never run
OPS-02	Suspension and cancellation lock rows in opposite orders	Rare deadlock

Items for owner review

- Inferred rationale: "Order now" and "Place tomorrow's order" confirm with one tap instead of the full cart (DEC-04).
- Inferred rationale: lead and operator split gives clear ownership (DEC-11); record an ADR?
- Inferred rationale: notifications are in-app only for lack of a provider (DEC-14).
- Theme per browser rather than per account (DEC-08).
- ADR 0010 says the AI has no write tools; the build gates write tools with a tap.
- Accepting reprices lines without asking the buyer (BUY-26).
- Which possible defects to fix.

Older documents in `docs/` differ from the code in places; the Technical Specification lists them.

18. Glossary

Term	Meaning
Business, connection	A buyer, supplier or platform company; a trading link between a buyer and a supplier
Invited business	A supplier record a buyer created for a business not on Tradelink
On hand, reserved, available	Units in stock; units held for orders; the difference
The rest	The part of a part-accepted order that comes later
Problem, credit, dispute	Something wrong with a delivery; money the supplier takes off; a refusal settled by an admin
Confirm card	A card that runs a proposed change only when tapped
RLS	Row Level Security: database rules on which rows a person can read
Idempotency key	A key that stops a retried action from running twice
